### Pandora

San Francisco, California

*Software Engineering Intern*

- Will be working with the Core engineering team this summer.

2014

### Frog Design

San Francisco, California

*Design Technologist Intern*

- Worked with an agile development team in the process of creating interaction models and front-end development for a major client.
- SenseSF, visualization software detailed in the projects section below.

2014

### Northfield Enterprise Center

Northfield, Minnesota

*Small Business Generalist*

- Designed a social media campaign product for BrandYourself, a Northfield social media consultancy.
- Designed marketing materials for Leadership Tools, a Northfield based leadership consultancy.

2006–2012

### Marketplace Magazine

Pella, Iowa

*Print and Web Designer*

- Developed the first online edition of the magazine on their website.
- Designed client automobile magazine pages every two weeks.

## projects

2014

### SenseSF

A web application built using d3.js designed to provide simple data visualizations for temperature, humidity, sound levels, and ambient light sensor data in the Frog San Francisco office. I constructed sensors and used five Raspberry Pi devices to provide JSON data used for the visualizations.

2014

### Shareplay

<http://shareplay.me>

A concurrently edited playlist manager and music player that users can text message to add to the queue. Implemented with Meteor.js, Bootstrap, and Twilio in 36 hours at HackGT, a hackathon at the Georgia Institute of Technology.

2014

### Ask Target

<https://github.com/chetaldrich/targethelp>

A help center like web application that routes questions by consumers sent by text and sends them to staff in store, creating a quick and easy way to get help. Implemented with Flask in 24 hours at UHack at the University of Minnesota, and was one of the top 20 entries at the hackathon.
